

WEATHER WARNING SYSTEM

Safety of the players, spectators and staff is our main concern at

South Carolina United FC

No weather event is more dangerous than lightning. Because of this threat we have installed the Thorguard Lightning Prediction System.

This system can provide advance warning of a lightning hazard, allowing you the time to seek shelter.

You will be alerted by one loud horn blast that will last **15 seconds**.

Upon hearing the horns, everyone should seek shelter immediately.

When this occurs, a strobe light located with the horns will activate and remain active while under a weather alert. Every attempt should be made to seek shelter in a safe environment.

The Thorguard system will determine when conditions are safe to return to your previous activities

Three 5-second blasts will indicate that everything is all clear and the strobe light will cease operation.

Horns and strobe light are located on the roof of the of the BB&T Complex and Polo Road Concession Buildings

SEEK SHELTER AT: Permanent Buildings & Vehicles

ALWAYS AVOID THE FOLLOWING:

Athletic Fields & Bleachers
Open Areas
Bodies of Water
Doors & Windows
Isolated Trees
High Elevations
